

Hi-Energy Fish

What is *Hi-Energy Fish*?

Hi-Energy Fish is a naturally fermented whole salmon. The unique properties of the salmon's pink flesh and high fat content means *Hi-Energy Fish* is unlike any other fish product on the market. The high volatile fatty acid [VFA] content (over 70%^a) results in increased biological activity and improved nutrient uptake for your seedling or established crop.

Why use *Hi-Energy Fish*?

From larger rootmass, to increased yield to higher quality forages/pastures, plants respond to the inclusion of *Hi-Energy Fish* to your tool kit. *Hi-Energy Fish* provides your crops with compounds that trigger their natural immune response and stimulate beneficial soil organisms that support plant health and release nutrients.

Is *Hi-Energy Fish* for organic or conventional production?

Growers in organic or conventional management systems can benefit from *Hi-Energy Fish*. It is approved for organic use in the US and Canada. Check with your certifier before using any products in organic production.

When should I use *Hi-Energy Fish*?

Hi-Energy Fish can be used at planting and throughout the growing season.

Both used 9-24-3 starter and planted same day
Left: no HEF; 14 rows on the cob
Right: *Hi-Energy Fish* added to starter; 16 rows on the cob; 11 bu/acre yield increase

How should I use *Hi-Energy Fish*?

Hi-Energy Fish can be used: in-trench as part of your starter blend; during the growing season as a component of foliar sprays and to boost forage quality/production as a spring/after-cut foliar. Adequate dilution is important. See the label for more details. 2-3-0 is not compatible with inputs containing free calcium (2-0-0 should be considered for blending with calcium).

Application rates

In-trench: 1-3 qt (1-3 L)/acre; 1:10+ dilution at planting

Transplants/root dip: 1:500 dilution

Foliar: 0.5-4 qt (0.5-4 L)/acre; 1:10+ dilution

Fertigation: 1:5000 dilution every watering

Hi-Energy Fish is not intended to be the sole input and should be part of a systems approach. Always do a jar test for compatibility when mixing this product with any other inputs.

^a71.01% total acids, DM (Dairy One report 24338880)
