

Feed the Root: Starter/Crop-Specific Fertilizers, Bio-stimulants, and Biologicals

A quick start helps crops maximize yield potential and stay ahead of weeds. But our climate limits the nutrient-cycling capacity of soils early in the season. Creating a nutrient-rich, biologically-active zone close to the seed can pay dividends all season long. Many of these products are also suitable for side-dressing.

Feed the Soil: Mineral and Carbon-Based Amendments

Every crop harvest exports nutrients from the field, and these must be replenished and balanced to sustain healthy crop production. High organic matter levels and balanced minerals optimize biological activity and improve soil structure.

Feed the Plant: Foliars and Liquid Fertilizers

In-season applications can help address nutrient deficiencies to maximize photosynthetic capacity. Well-nourished plants are naturally pest and disease resistant and build soil organic matter through the liquid carbon pathway.

Crop Production Aids: Last Line of Defence

Despite our best efforts and intentions, factors beyond our control can result in pest and disease outbreaks that threaten the economic sustainability of our farms. SureSource is a Licenced Pesticide Vendor in Ontario, with more provinces coming – probably the only one focused exclusively on the needs of certified organic producers. Contact us to learn more about the products we offer.
